Completed DGMK-Projects

Representation of AGQM in DGMK's project attending committees since 2012

- DGMK 702 Development of a method for the characterization of the oxidation stability of domestic heating oil with alternative components using chemiluminescence
- DGMK 714 Deposit formation by 20 % (V/V) FAME fuels in premix burner systems
- DGMK 715 Microbiological contamination of biogenic fuels
- DGMK 729 Application characteristics of fuels with biogenic components
- DGMK 743 Hydrogenated vegetable oil as a substitute for low sulphur light heating oil
- DGMK 749 Deposit formation in pre-mixing burner systems – investigation of the cause and minimization by modifying the evaporator surface
- DGMK 762 Influence of the ageing of middle distillates with alternative components on operability and assessment of additives according to no-harm criteria
- DGMK 763 Development of a new test procedure for the assessment of the stability of heating oils with biogenic components
- DGMK 764 Cold-resistance of diesel fuels and operability of vehicles (Part 1)
- DGMK 770 Development of micro emulsions (water/ oil); their stabilizing mechanisms and their influence on operating safety of middle distillates, for example of light heating oil, heating oil A and bio in technical applications
